

Chuck Capper

Tabletop, Semi-Automatic and Fully Automatic Models Available

Chuck Capping Machines use a chuck head that is sized to a specific cap or range of caps, with some using a rubber chuck insert to help tighten caps onto the containers. Once the cap is in place, with manually or automatically, the chuck head descends to cover the cap and apply torque to create a consistent and reliable seal. Chuck cappers work with continuous thread closures such as flat caps, sports caps and more!

Standard Features:

- Stainless Steel or Brushed Aluminum Chuck with Rubber Inserts Available
- Simple Operation and Changeover on All Levels of Automation
- Pneumatic & Electric Models Available
- Cap Delivery System on Automatic Models
- Easy Height Adjustment for Containers Both Large and Small
- Various Chuck Sizes and Inserts for Different Cap Types and Sizes
